

NK-16

BOILER WATER SAMPLER

GENERAL FEATURES

It is necessary to take samples from the boiler water from time to time to check whether the boiler water conductivity value is measured correctly. If the boiler water is taken to an open case, some of the sample water taken will become a flash steam, so it will not be a healthy sample and a correct value measurement situation will not be exist. To avoid this situation, a closed and cooled device, the NK-16 sampling container, must be used.
