

Corrosiveness to Copper from Petroleum Products

ASTM D130 - EN/ISO 2160 - IP 154 - DIN 51811 - ASTM D4048 - IP 112 - ASTM D7095

- ⊕ Stainless steel bath
- ⊕ Cooling coil
- ⊕ Bath drain
- ⊕ Easy to operate
- ⊕ Position for 6 test cylinders (9 optional)

Item	Unit	TC16
Ordering code TC16 230V Circulator	50 or 60Hz	31T0671
TC16 115V Circulator	60Hz	31T0861
Power	[kW]	1.5
Range	°C °F	Ambient .. 250 Ambient .. 482
Reading		°C or °F
Setting	[°]	0.1
Stability	[°K]	0.02
Heating	[kW]	1.4
Bath volume	[L]	16
Bath opening	[mm]	6 x 51 (9 x 51 optional)
Bath depth	[mm]	220
Length	[mm]	480
Width	[mm]	295
Height	[mm]	480
Materials	Used inside bath: stainless steel 304, brass	
CE	Conforms to CE regulation	

General

The test method covers the detection of the corrosiveness to copper of aviation gasoline, aviation turbine fuel, automotive gasoline, natural gasoline or other hydrocarbons having a Reid Vapour Pressure no greater than 18 psi. The cover of the bath has six openings, each with a lid and hook for suspending a copper corrosion test vessel (P/N 14T0100). Or the openings can accommodate test tubes in holders (P/N 14T0102). The temperature range is from ambient +5°C to 250°C. Optional is a cover with nine holes to test nine samples (P/N 03T2311).

Accuracy

The insulation of the bath and electronic design result in a very stable working temperature of $\pm 0.02^\circ$ The set point can be set in steps of 0.1° in the range of 0°C up to 250°C (-148..482°F). The accuracy on the display is displayed in 0.1°C. However the controller has an internal accuracy of 0.01°C.

Temperature readout

Standard available in °C, on request in °F.

Pump

When not used for copper corrosion tests, the pump can be used to circulate the bath content to an external application.

Safety

The bath conforms to CE regulation. It is further equipped with a mechanical resettable safety thermostat. Optional is a low liquid floater (P/N 07T0080).

Alternative

We also offer a TC40 bath with a cover for 18 positions (P/N 03T2313).

Corrosiveness to Copper from Petroleum Products

Accessories

P/N	Picture	Description
14T0100		Pressure vessel for copper strip corrosion test, test cylinder with o-ring. Cylinder is supplied with works certificate.
14T0101		Lid and mounting hook (six pieces standard included)
13T8000		Top lid with six 51ø mm holes and thermometer hole (standard included)
31T0003		ASTM copper strip corrosion test standard
31T0002		Copper strip (per one strip) 12.5 x 3.0 x 75 mm (width x thick x length) 99.9 % purity
31T0001		Sanding paper silicon carbide P220
09T0010		Test tube 25 x150mm

Corrosiveness to Copper from Petroleum Products

Accessories

P/N	Picture	Description
14T0102		Test tube (25 x 150 mm) holder
31T0000		Multistrip vise, holds up to four strips while polishing
03T2311		Top lid with nine 51ø mm holes. Please separately order 3* P/N 14T0101 additionally.
31T0005		Silicon carbide powder 105 µm (1 kg)
09T0011		Flat viewing test tube
08T0001		Bath fluid silicon oil 20..150°C 20ltr
25T0911		ASTM 12C thermometer
25T2154		Thermometer holder, 425 x 10mm
31T0008		Vented stopper made from silicon rubber for test tube (P/N 09T0010). 25 pieces. Width 24 (top) to 18 (bottom) mm. Length 30 mm. Hole of 4 mm. Temperature resistant from -60 to +180°C.
31T0009		Sanding paper silicon carbide P240

Corrosiveness to copper from Petroleum Products**Accessories**

P/N	Picture	Description
24T0385		O-ring for test cylinder (P/N 14T0100)
31T0010		Disposable copper foil strip for ASTM D7095 (one piece)
31T0011		Scouring pad 400 grit
14T0109		Test tube holder test jar conform ASTM D4048
31T0012		Test jar ASTM D4048
31T0013		Vented cork for test jar (P/N 31T0012). 10 pieces.
