These valves are mounted in the mains lines (one in each line) of oil systems to prevent oil draining from feeders situated in high positions.

Diese ventiline wedern in die hauptleitungen (eines je leitung) von oleanlagen oder fettanlagen eingesetzt, um ein eventuelles entleeren von leitungen zu verhindern, die hoher angebrachte dosiervorrichtungen speisen.

Queste valvole vanno inserite nelle linee principali (una per linea) degli impianti a olio per evitare eventuale svuotamento delle tubazioni che alimentano dosatori in posizioni molto elevate.
