

Transmitters, Head-mounted Transmitters, Trip Amplifiers, Switch Amplifiers, RC Unit Snubber

For the conversion of sensor signals to current signals and protection of contacts against overload

Type ELM

KSR KUEBLER GmbH • Datasheet ELM

Applications

- Accessories for use with sensors and switches

Special features

- Explosion protection optional for some units

Description

Transmitters

Transmitters convert a resistance input into a proportional analogue respectively digital output. They can be installed in the sensor head (head-mounted) or in a cabinet (rail-mounted). Transmitters are used with level sensors.

Trip amplifiers

The set point relays monitor trip limits in measurements using current/voltage signals. These signals can be generated by level transmitters. Set point relays can be configured using DIP switches and potentiometers

Switch amplifiers

Switch amplifiers are used to switch higher currents. A binary switch connected to the control circuit on the input triggers the relay with a higher contact rating. This increases service life considerably. The output relay is voltage-free. Inputs are safely separated from outputs and supply voltage. Switch amplifiers are temperature stabilised and guarantee reliable switching operation.

RC Unit Snubbers

RC-unit snubbers are used to suppress voltage peaks in AC circuits. They protect the contacts of a float switch or magnetic switch.
