

Command and signal module

Model D122F022-A014

Eurocard (Moog G127) Format
Command and signal module

Description:

The D122F022-A014 allows to select different signal sources for up to three signals. To generate test demand values a potentiometer is fitted to the front panel. This card facilitates system setups or maintenance.

Applications:

This card allows to monitor several signals via the front panel terminals as well as demand value generation and switching and is especially suited for system setup and maintenance.

Technical data:

Power supply: $\pm 15V$ stab. (100mA each)
